

GenWizard™

Unlocking the future of technology delivery

Integrated Intelligent Automation

Intelligent automation has the potential to transform technology delivery at speed and scale by significantly increasing efficiency. Through the automation of recurring tasks, organizations can redirect resources to tackle more complex challenges. But what is the first step of the automation journey? Where does an organization begin?

GenWizard Overview

GenWizard is an intelligent automation platform powered by generative AI that revolutionizes the technology delivery lifecycle and creates data-driven outcomes. With its one-place, one-platform approach, GenWizard enables enterprise transformation from a single platform.

For federal agencies, GenWizard helps leaders analyze applications and systems to identify opportunities for automation, generate code and architecture, and supports reverse engineering efforts. This creates efficiency that increases speed to market and allows for increased productivity with resources able to focus on achieving enterprise goals.

GenWizard Components

Modern Operations

- Expedites ticket resolution through predictive and proactive operations monitoring combined with auto-resolving capabilities.
- Drives proactive prevention of incidents to streamline operations and minimize disruptions.

Modern Engineering

- Accelerates end-to-end software development by generating user stories, architecture, design, code, test and platform artifacts for new features to increase productivity.
- Analyzes applications, code, and systems to understand change impact, recommend refactoring, and rearchitect solutions to accelerate application modernization.

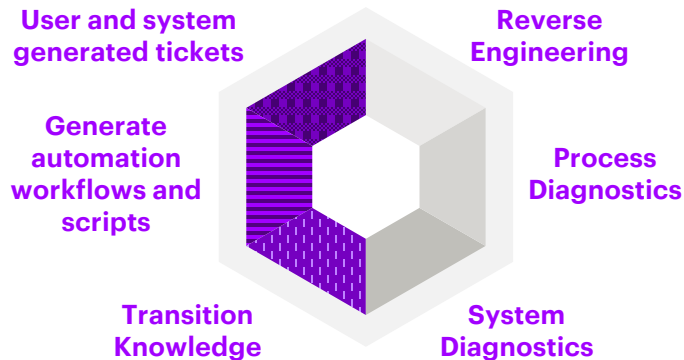

Knowledge Management

- Streamlines the transition, sharing, and digitization of knowledge from multiple sources to enable seamless collaboration and informed decisions.

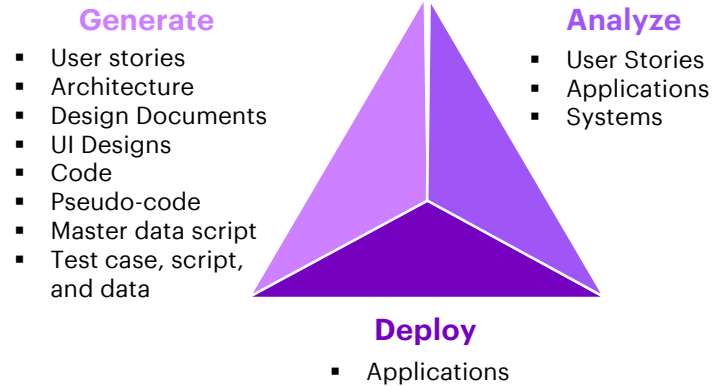

GenWizard for Modern Operations

Modern Operations helps reduce spend while accelerating modernization.

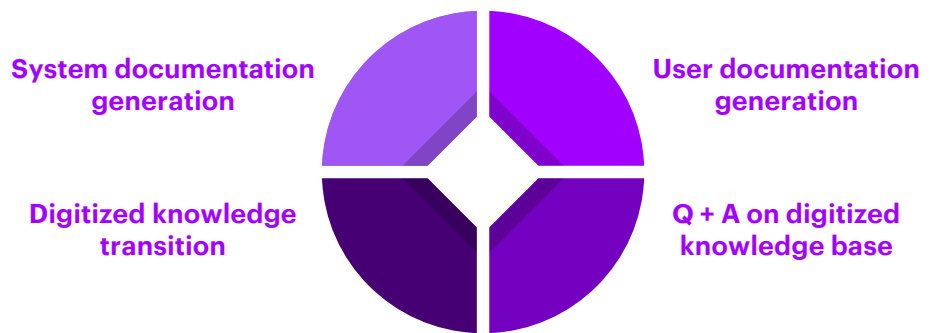

GenWizard for Modern Engineering

Modern Engineering accelerates software engineering with improved quality.

GenWizard for Knowledge Transition and Management

Knowledge Transition and Management provides a living knowledge base of system and process documentation.

GenWizard Benefits

5-8X

faster speed to implementation

>95%

improvement in end user experience

>50%

improvement in software quality

40-60%

reduction in IT costs

About Accenture Federal Services

Accenture Federal Services is a US subsidiary of Accenture LLP that government agencies choose to drive impactful change. Our 15,000 people are committed to powering reinvention for the federal government with the same commercial technology, competitive drive and technical edge that is transforming global industry—ensuring that federal enterprises can be as modern, fast, and efficient as the country it serves. See how we reinvent at www.accenturefederal.com.
